A Global Technology Leader

With multiple facilities and about 2,000 employees, L3Harris has operated in the U.K. for nearly 100 years, providing diverse and broad-based capabilities across air, land and maritime domains.

UNITED KINGDOM FACTS

With its RC-135 based Airseeker programme, L3Harris delivers strategic and tactical intelligence, surveillance and reconnaissance (ISR) to meet warfighter requirements.

The company also provides carriage, release and interfacing solutions to integrate weapons and stores onto all types of manned and unmanned air platforms. These systems have been on almost every U.K. aircraft for over 50 years.

For more than 20 years in the U.K., L3Harris has provided manned airborne EO/IR surveillance systems for the military, security services and elements of law enforcement. The company is the #1 provider of Night Vision to the U.K. MOD.

L3Harris in the U.K. has a full set of capabilities to support the European Tactical Communications customer base with sales, production, repairs and demonstration/training facilities across our broad portfolio of tactical communications solutions. L3Harris is the proud designer, supplier and maintainer of the 50,000 tactical radios in the Bowman tactical C4I system in service with the British armed forces and is working to assist the U.K.

MoD define and deliver the next generation system Morpheus.

The company is also supplying 122 T7™ multi-mission robots to the U.K. Ministry of Defence to help defeat improvised explosive devices (IEDs) and unexploded ordnances (UXO).

L3Harris specialises in the provision of navigation, communication, automation and training solutions – providing through-life management, in-service-support and training for platforms from T26 Frigates and Albion to the Queen Elizabeth Class Aircraft Carrier. L3Harris also develops world-leading Autonomous Surface Vessel (ASV) technology for defence and commercial applications.

L3Harris offers numerous solutions for commercial aviation. These include pilot training with high-fidelity, full flight simulators; advanced screening solutions; Flight Data Analysis that supports more than 130 operators and over 4,000 flights per day; and Air Traffic Management (ATM) systems that help provide secure, scalable air traffic growth. The company provides voice communications and airport optimisation solutions for NATS, the Air Navigation Service Provider of the U.K.
ADVANCED SOLUTIONS FOR UK CUSTOMERS

AIR ENVIRONMENT

Defence:
> Strategic and Tactical ISR
> Carriage and Release
> Airborne EO/IR Surveillance Systems
> Electronic Warfare
> Night Vision
> Signals Intelligence
> Space Situation Awareness
> Missile Defence

Commercial Aviation:
> Pilot Training / Full Fight Simulators
> Flight Data Analysis
> Telecommunications Infrastructure and Services
> Voice Communication Systems
> System Wide Information Management
> Airport and Airline Operations Management

LAND ENVIRONMENT
> Tactical Communications Systems
> C-RIED, Land Electronic Warfare
> Cyber and Government-grade Secure Communications
> Multi-Mission Robotics
> Complex Information Management for Situational Awareness
> Geospatial Analytics
> Customer Geospatial Software Solutions
> Nationwide Mapping (LiDAR)

MARITIME ENVIRONMENT
> Integrated Platform Management Systems
> Autonomous Surface Vessels
> Navigation, Communication and Automation Systems
> Training
> Through-life Management

LOCATIONS IN UK
> Bournemouth
> Bracknell
> Brighton
> Bristol
> Burgess Hill
> Coventry
> Crawley
> Dorset
> Fareham
> Farnborough
> Fleet
> London
> Portchester
> Portsmouth
> Southampton
> Tewkesbury
