

WHAT IS THE DISRUPTOR SRx?

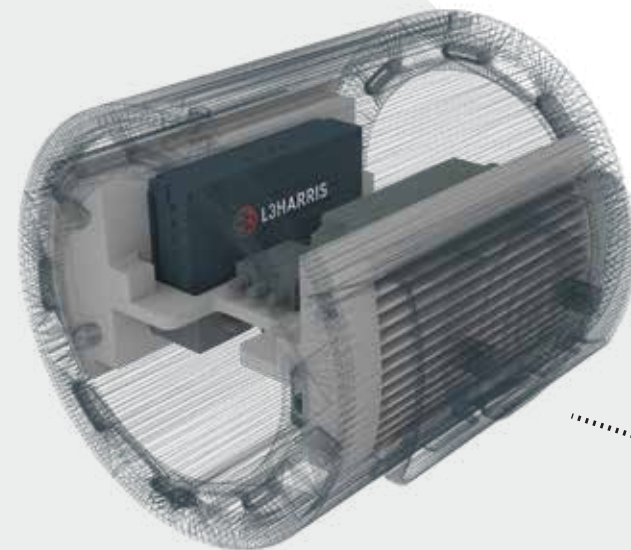

A small, lightweight, advanced electronic warfare (EW) system that can support multiple functions:

- > Electronic attack (EA)
- > Electronic support measures (ESM)
- > Advanced EW techniques

BENEFITS:

- > Multifunction flexibility increases capability while reducing size, weight and power (SWaP)
- > Programmable, software-defined architecture enables reconfigurability to meet emerging EW threats
- > Modular scalability and adaptability allow for use with almost any platforms

HOW CAN IT BE USED?

UAV EW PAYLOAD APPLICATION:

The Disruptor's small SWaP enables unmanned aerial vehicles (UAVs) to act as decoys, disrupt enemy ground systems and protect themselves against anti-aircraft defense radars. These capabilities increase the probability of mission success.

HOW DOES IT FIT FUTURE MISSION NEEDS?

ENABLING EW SWARMS:

Disruptor is a powerful and flexible system that is perfectly suited to enable EW swarms, both offensive and defensive, in support of emerging mission needs.
