

L3Harris has joined forces with Samsung to help public safety, utility, enterprise, manufacturing, health care and transportation front line workers make critical connections. Samsung is a member of the L3Harris Mission Critical Alliance, a partner program for best-of-breed interoperable technologies to meet evolving customer needs.

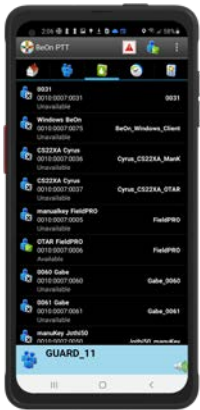

BeOn®, Public Safety's most advanced Push-To-Talk (PTT) solution, is now available on the Samsung Galaxy® XCover Pro and XCover FieldPro. With a push of a side phone button, BeOn works like a land mobile radio providing group or individual communications, emergency distress calls, and location information. Once the BeOn application is open, a button's push provides rapid communications to users within your workgroup.

- The Samsung Galaxy Xcover Pro answers front-line challenges with a design resistant to dust and water and ruggedized against accidental drops with the Corning® Gorilla® Glass screen protection.
- The Samsung Galaxy Xcover Field Pro is designed for Public Safety users requiring priority access and is available on the AT&T / FirstNet® network.

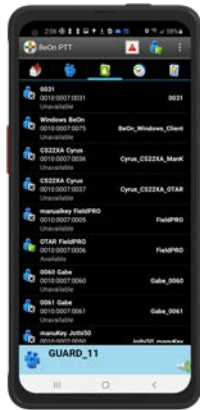

BeOn Mobile Communications Fast, Secure Voice and Data Connectivity

- Talk one-to-one or on pre-defined talkgroups wherever LTE or Wi-Fi coverage is available. Map location, track and share the status of all team members for a more efficient response
- Protect confidential information through the same encrypted technologies used by police, fire, and rescue
- Extend connectivity beyond your L3Harris VIDA® system's coverage area or subscribe to BeOn as-a-service through a hosted VIDA core

SPECIFICATIONS

Quickly communicate with individuals and talk groups at the push of a button

Send critical updates to team members via group text

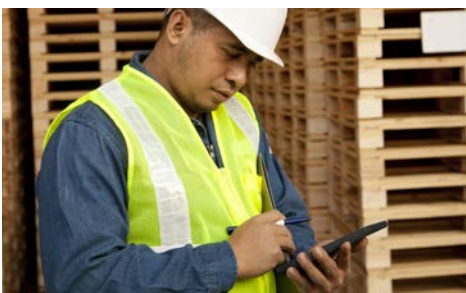

Instant BeOn access via dedicated button

The Samsung partnership brings significant benefits to all L3Harris BeOn users:

- Leading supplier of Android™ phones gives users greater choice of non-proprietary features and apps
- Frequent firmware updates to maintain secure voice and data operations
- Reduced risk and troubleshooting through tested and proven end-to-end solutions
- Improved system integration with standards-based platforms
- Simplified procurement and access to long-term support
