# FLIGHT DATA MONITORING SAFETY MANAGER SUPPORT SERVICE

The flight safety support service is an extension to the Flight Data Connect service where our expert analysis and investigation capability enables operators to release pilots from the office allowing the safety team to focus on actioning safety. Led by Rob Holliday, former head of operational safety at IATA, your tailored package will deliver value across your operation.

> Save time and resources by having all high severity events investigated, reported on and closed

> We will work with your safety management system and enter reports for all safety and maintenance events

> Objective reports provided highlighting key risks with guidance on potential resolutions

> Save money with 12 out of hours support calls free of charge

> Take advantage of our experience with informed flight data event threshold reviews every six months

> Ensure complete data representation with data upload monitoring

"Outsourcing flight data monitoring to L3Harris, has been really positive step for our safety management system. They take care of all the validation, analysis and investigation of flight data, allowing us to concentrate on managing safety.

L3Harris's detailed, timely analysis of events and presentation of data statistics has identified areas of the operation for discussion, generated engagement in safety and facilitated key safety interventions."

Susan Gautrey,
**European Safety Manager
at Luxaviation**

We identify key risks by providing objective data analysis from an independent perspective

Focus on actioning the data utilising our directive, not interpreting

Gain elite expertise, at a lesser cost than a full time safety manager

Tailored or standard packages, which scale with your operation

L3HARRIS™
FAST. FORWARD.
