

NEXT-GENERATION WEATHER SOLUTIONS: GEOXO SOUNDER (GXS)

Critical technology for increasing severe weather warning times and, ultimately, saving lives.

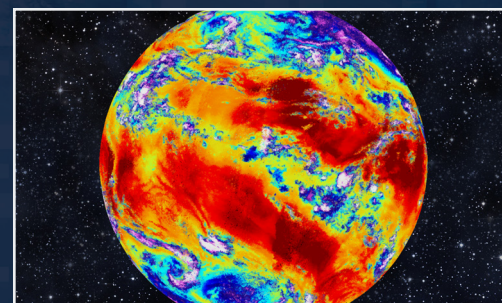

Scans the globe every 30 minutes as compared to every 12 hours from low Earth orbit

Enables creation of new weather products that will greatly enhance short-term "now-casting" and long-term forecast models

Provides enhanced intensity and path prediction for severe weather development, including tornadoes, blizzards, fires, floods, thunderstorms and other life-threatening events

Advances climate science by providing measurement continuity for long-term weather observations, a key indicator for climate change measurement, and predictions
