

900 MHZ REBANDING: ARE YOU PREPARED?

To meet increasing demand and open up spectrum for utilities and other industrial users that require additional access to broadband service, the FCC is transforming the 900 MHz band. This will require certain users of 900 MHz frequencies to be transitioned to new frequencies on a county-by-county basis in the coming months.

Don't let rebanding put your organization's critical communications network at risk.

L3HARRIS IS READY TO HELP WITH:

Evaluating your current network to determine what equipment needs to be retuned or replaced.

Creating a project plan to successfully migrate your system and users based on our extensive rebanding knowledge and experience.

Upgrading network infrastructure for improved capabilities and enhanced security.

Retuning existing equipment for greater efficiency and strong resiliency.

AFFECTED FREQUENCIES: 897.5 MHz–900.5 MHz / 936.5 MHz–939.5 MHz

If your frequency is on the list, L3Harris frequency migration experts can help you explore your options and make the transition to a new frequency as smooth and seamless as possible.

WE'VE GOT YOUR BACK.

Having successfully guided our customers through the previous 800 MHz rebanding, our experienced migration team understands the complexities and frustrations that come with moving to a new frequency. We'll help you develop a plan to manage the transition and ensure that you are ready to meet whatever challenges lie ahead.
