ROVER® 6S TRANSCEIVER

The next generation of rugged, all-in-one, transportable ROVER radios

The L3Harris ROVER 6S is an upgrade to the popular, widely fielded ROVER 6 transceiver. Expanded frequencies, additional processing resources for capability growth, Type-1 encryption/decryption and other enhanced features set it apart from earlier ROVER products. This rugged and reliable transceiver transforms sensor-to-shooter networking, allowing increased levels of collaboration and interoperability with numerous manned and unmanned airborne platforms.

PRODUCT DESCRIPTION

Designed for air, surface and maritime use, the L3Harris ROVER 6S transceiver provides real-time, full-motion video (FMV) and other network data for situational awareness, targeting, battle damage assessment, surveillance, relay, convoy overwatch operations and other situations where eyes-on-target are required. The ROVER 6S radio contains a National Security Agency (NSA) certified Communications Security Module.

The ROVER 6S Transceiver has two receiver channels. This frequency and spatial diversity provides link redundancy, robust reception and resiliency to platform shadowing, multi-path interference, line-of-sight blockages and RF interference. With an unmatched waveform set, ROVER 6S is interoperable with virtually all large airframes, UAVs and targeting pods in theater today.
